Opencv visual c windows forms

I'm not robot!

Главная Пакет OpenCV OpenCV OpenCV c windows forms Главная Пакет OpenCV OpenCV OpenCV c windows forms In this brief tutorial we will create a Fahrenheit to Celsius converter using a Windows Forms Application written in C++. This tutorial assumes you have Microsoft Visual Studio installed (2008 or 2010 versions should all work – scroll down for tips on working with Visual Studio 2012, 2013 or 2015). 1) Run Visual Studio 2) Pull down the File menu and choose New Project 3) Open up the Visual C++ folder (this may be located in the “Other Languages” folder) on the left hand side. Select CLR category within Visual C++ and then highlight “Windows Forms Application” on the right side 4) Give the new application a name: FtoC Visual Studio 2012 Visual Studio 2010 5) Click the OK button to create the new blank Form1. At this point the new Windows Forms Application will be created and a new blank form will appear. Adding the Forms Project Templates to Visual Studio 2012 If you do not see the Windows Forms templates in the Visual Studio 2012, you must first add them by following this note and/or this note: www.t-hart.org/vs2012/ Creating a Forms Application in Visual Studio 2013 and 2015 If you are working with Visual Studio 2013 or Visual Studio 2015, you will need to manually add a Form to a CLR application. This link has some steps which can be summarized as: Create a new Project. Select the Visual C++ folder, then CLR and finally select CLR Empty Project Give the new application a name: FtoC and click OK. Pull down the Project menu and select Add New Item. Select the UI folder on the left and then select Windows Form on the right. Name the form Form1.h and click the Add button. In the Solution Explorer, right-click on the Form1.cpp file and select View Code. Add the following code to the Form1.cpp file and save it: #include "Form1.h" using namespace FtoC; using namespace System; using namespace System::Windows::Forms; [STAThreadAttribute] int main(array ^args) { // Enabling Windows XP visual effects before any controls are created Application::EnableVisualStyles(); Application::SetCompatibleTextRenderingDefault(false); // Create the main window and run it Application::Run(gcnew Form1()); return 0; } Note: If you have created your project under a different name, you will need to change the the namespace to match the main namespace of your project. For example if you just created a project named MyCalculator, change the line: using namespace FtoC; so that it matches the name of the namespace: using namespace MyCalculator; In addition, if you gave the new form a different name (such as MyForm) you will need to change all references in the rest of this tutorial from Form1 to MyForm. Pull down the Project menu and select Properties. Open up the Configuration Properties and then Linker and then System. Change the SubSystem property to Windows (/SUBSYSTEM:WINDOWS). Open up the Configuration Properties and then Linker and then Advanced. Set the Entry Point property to main (just type in main). This should match the main function specified in the code above in Form1.cpp. Save all of the files and the Project and now you are ready to continue with the rest of the tutorial. Reminder: If you added the form named “MyForm” (instead of Form1) you will need to adjust the rest of the instructions in this tutorial. Pages: 1 2 3 4 5 6 7 8 9 10 11 12 13 14 CodeProject, 20 Bay Street, 11th Floor Toronto, Ontario, Canada M5J 2N8 +1 (416) 849-8900 Instantly share code, notes, and snippets. Всем привет! Хочу вывести изображение с веб камеры на форму по нажатию кнопки используя OpenCV 3.1.0 и visual studio 2015. У меня проблема с выводом кадра в pictureBox1, а конкретно с незнанием, как это сделать. Как открыть камеру я разобрался (Camera.cpp) Очень хочу разобраться (свои размышления сделал в виде комментариев в camera.cpp скорей всего я не прав и хотел бы узнать, как правильно) Form1.h Кликните здесь для просмотра всего текста C++1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 66 67 68 69 70 71 72 73 74 75 76 77 78 79 80 81 82 83 84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104 105 106 107 108 109 110 111 112 113 114 115 116 117 118 119 #include "camera.h" #include #include #include #include #include #include "stdafx.h" #pragma once namespace CppCLR_WinformsProjekt { using namespace System; using namespace System::ComponentModel; using namespace System::Collections; using namespace System::Windows::Forms; using namespace System::Data; using namespace System::Drawing; /// /// Zusammenfassung fьr Form1 /// public ref class Form1 : public System::Windows::Forms::Form { public: Form1(void) { InitializeComponent(); // //TODO: Konstruktorcode hier hinzufьgen. // // capture = new cv::VideoCapture(); } protected: /// /// Verwendete Ressourcen bereinigen. /// ~Form1() { if (components) { delete components; } } private: System::Windows::Forms::PictureBox^ pictureBox1; protected: protected: private: System::Windows::Forms::Button^ button1; protected: private: /// /// Erforderliche Designervariable. /// System::ComponentModel::Container ^components; #pragma region Windows Form Designer generated code /// /// Erforderliche Methode fьr die Designerunterstьtzung. /// Der Inhalt der Methode darf nicht mit dem Code-Editor geдndert werden. /// void InitializeComponent(void) { this->pictureBox1 = (gcnew System::Windows::Forms::PictureBox()); this->button1 = (gcnew System::Windows::Forms::Button()); (cli::safe_cast(this->pictureBox1))->BeginInit(); this->SuspendLayout(); // // pictureBox1 // this->pictureBox1->BackColor = System::Drawing::SystemColors::Desktop; this->pictureBox1->Location = System::Drawing::Point(12, 12); this->pictureBox1->Name = L"pictureBox1"; this->pictureBox1->Size = System::Drawing::Size(511, 440); this->pictureBox1->TabIndex = 0; this->pictureBox1->TabStop = false; this->pictureBox1->Click += gcnew System::EventHandler(this, &Form1::pictureBox1_Click); // // button1 // this->button1->Location = System::Drawing::Point(561, 43); this->button1->Name = L"button1"; this->button1->Size = System::Drawing::Size(115, 27); this->button1->TabIndex = 1; this->button1->Text = L"button1"; this->button1->UseVisualStyleBackColor = true; this->button1->Click += gcnew System::EventHandler(this, &Form1::button1_Click); // // Form1 // this->AutoScaleDimensions = System::Drawing::SizeF(6, 13); this->AutoScaleMode = System::Windows::Forms::AutoScaleMode::Font; this->ClientSize = System::Drawing::Size(920, 621); this->Controls->Add(this->button1); this->Controls->Add(this->pictureBox1); this->Name = L"Form1"; this->Text = L"Form1"; this->Load += gcnew System::EventHandler(this, &Form1::Form1_Load); (cli::safe_cast(this->pictureBox1))->EndInit(); this->ResumeLayout(false); } #pragma endregion private: private: System::Void Form1_Load(System::Object^ sender, System::EventArgs^ e) { } private: System::Void pictureBox1_Click(System::Object^ sender, System::EventArgs^ e) { } private: System::Void button1_Click(System::Object^ sender, System::EventArgs^ e) { Start(); } }; } Camera.cpp Кликните здесь для просмотра всего текста C++1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50 51 52 53 54 55 56 57 58 59 60 61 62 63 64 65 #include "stdafx.h" #include "camera.h" //#include "opencv2/highgui/highgui_c.h" //#include "include\iANPR.h" #include #include #include #include #include #include using namespace cv; using namespace std; IplImage* image = 0; IplImage* image1 = 0; IplImage* image12 = 0; IplImage* gray = 0; IplImage* bin = 0; IplImage* dst = 0; IplImage* image44 = 0; IplImage* templ = 0; IplImage* templ12 = 0; IplImage* dst2[4]; IplImage* xit = 0; IplImage* sr = 0; int x; int y; CvCapture* capture; bool stop; void Start() { int i = 0; int counter = 0; Mat frame, src, src_gray, img; VideoCapture cap; cap.open(CV_CAP_ANY); int deviceID = CV_CAP_ANY; int apiID = cv::CAP_ANY; cap.open(deviceID + apiID); for (;;) { cap.read(frame); //Тут получаю кадр из камеры //pictureBox1->Image = frame; //неудачная попытка cvtColor(frame, src_gray, CV_BGR2GRAY); GaussianBlur(src_gray, src_gray, Size(9, 9), 2, 2); //переход к серому img = src_gray; IplImage img1((IplImage)src_gray);// не знаю на сколько правильно так делать но это переход к IplImage //img1 мне надо вывести на форму //мне кажется что return img1; мог бы мне помочь если бы не было в цикле } } void Stop() { stop = true; } camera.h Кликните здесь для просмотра всего текста C++1 2 3 #pragma once void Start(); void Stop();
